

Managed Ethernet Circuits to Major UK Data Centres

Metronet offers customer premises to data centre and data centre to data centre connectivity in flexible formats with a choice of copper 100mbit or copper or optical fibre gigabit, we have lit our own dark fibre and as such is completely resilient of other third parties providers in Manchester. Combined with the ability to interconnect via Telehouse North and Telehouse East customers can extend their network reach with up to an additional 21 datacentres in London and further a field in Europe.

Services include, single vlan, QinQ or EoMPLS for ease of integration.

Metronet also offers direct circuit handoff at the following locations for our wholesale partners and resellers. So partners who take our wholesale last mile ethernet can choose to have the circuits terminated in one or more locations. Unlike BT 21CN wholesale ethernet product metronet does not charge for the interconnectivity and has no minimum commit or spend. So partners can enjoy all the same benefits without the costs and long provisioning times.

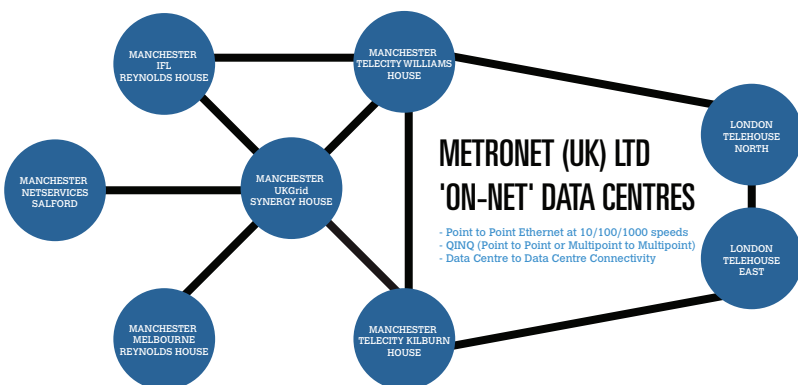

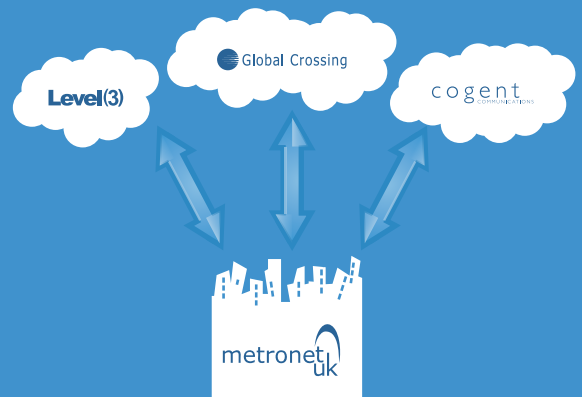

IP Transit

For organisations that depend upon a high level of Internet availability and resilience such as, regional ISPs and hosting companies, Metronet offers powerful, flexible and cost effective IP Transit services. As a tier 2 provider with its own fully resilient multi-homed network, Metronet has multiple connections to tier 1 providers and other tier 2 providers allowing it to deliver independent IP transit.

With ownership and responsibility for its own independent core network and last mile delivery circuits, Metronet is the only network operator capable of delivering tier 1 services at a price that is within reach of SMEs inside its areas of coverage.

With direct tier 1 interconnects with Globalcrossing, Level3 and Cogent, three of the global top 5 tier1 providers ensures unparalleled performance, diversity and quality to all our customers for all their mission critical applications and users.

Metronet's IP Transit services are covered by the Company's Industry leading SLA providing reassurance of service continuity. Add a completely independent 'last mile' access infrastructure and backbone network, and it becomes clear that Metronet is an obvious partner for anyone seeking maximum service resilience.
