

# Managed Hosting

Metronet (UK) does not approach managed hosting as a commodity product. We work with a select few customers where we can add real value, customers that have very specific requirements and are running mission critical applications. Metronet (UK) will design a customised solution to be built on either a shared hardware or dedicated hardware platform. In this way Metronet meets exactly the performance, bandwidth, storage, and resiliency requirements of the customer. Like all Metronet products, our service is monitored 24 x 7 and a customer can speak directly to a knowledgeable technical specialist who can take action any time of the day or night.

Metronet hosting offers high-availability firewalls, industry leading intrusion prevention services, load-balancing, SANs, Clustering including Microsoft SQL, state of the art monitoring and solution visibility for the customer, combined with dedicated off-site backup to an alternative data centre location over our own dark fibre network.

## Why Managed Hosting is right for you:
